# Baltic Sea2Land

Fostering integrated governance for the joint sustainable use of human and natural capital in the near shore zone

The project Baltic Sea2Land is working towards equipping public authorities with a new tool – the **Sea2Land Navigator**. This tool comprises various qualitative information on the best practice in coordinated management of land and sea, as well as spatial data. With the integration of multi-level governance principles, the tool will aid in harmonising land and marine planning and balancing initiatives that impact coastal development both across sectors and borders.

**This #MadeWithInterreg project** helps drive the transition to a green and resilient Baltic Sea region.

Organisations from the following countries cooperate together to make that happen:

Estonia, Finland, Germany, Latvia, Lithuania, Poland
